

Recombinant Human PCDH11Y Protein, His tagged

Cat. No. PCDH11Y-01H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human PCDH11Y Protein (57-844 aa) with His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	57-844 aa
Description	This gene belongs to the protocadherin family, a subfamily of the cadherin superfamily. The encoded protein consists of an extracellular domain containing seven cadherin repeats, a transmembrane domain, and a cytoplasmic tail that differs from those of the classical cadherins. This gene is located on the Y chromosome in a block of X/Y homology and is very closely related to its paralog on the X chromosome. The protein is thought to play a role in cell-cell recognition during development of the central nervous system. Alternative splicing results in multiple transcript variants encoding different isoforms.
