

Recombinant Human SNAP25 Protein, His tagged

Cat. No. SNAP25-001H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human SNAP25 Protein (1-180 aa) with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	1-180 aa
Description	Synaptic vesicle membrane docking and fusion is mediated by SNAREs (soluble N-ethylmaleimide-sensitive factor attachment protein receptors) located on the vesicle membrane (v-SNAREs) and the target membrane (t-SNAREs). The assembled v-SNARE/t-SNARE complex consists of a bundle of four helices, one of which is supplied by v-SNARE and the other three by t-SNARE. For t-SNAREs on the plasma membrane, the protein syntaxin supplies one helix and the protein encoded by this gene contributes the other two. Therefore, this gene product is a presynaptic plasma membrane protein involved in the regulation of neurotransmitter release. Two alternative transcript variants encoding different protein isoforms have been described for this gene.
