Description	The protein encoded by this gene is a DNA binding homeobox transcription factor involved in embryonic stem (ES) cell proliferation, renewal, and pluripotency. The encoded protein can block ES cell differentiation and can also autorepress its own expression in differentiating cells. Several transcript variants encoding different isoforms have been found for this gene.
Form	Lyophilized powder, Lyophilized from a 0.2 µm filtered solution in PBS (pH 7.4)
Molecular Mass	35 kDa
Purity	> 85%, SDS-PAGE under reducing conditions and visualized by Coomassie blue staining
