

Recombinant Full Length Human UQCRB Protein, Flag tagged

Cat. No. UQCRB-15HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant protein of human ubiquinol-cytochrome c reductase binding protein (UQCRB), nuclear gene encoding mitochondrial protein with Flag tag was expressed in HEK293T.
Species	Human
Source	HEK293T
ProteinLength	1-111 aa
Description	This gene encodes a subunit of the ubiquinol-cytochrome c oxidoreductase complex, which consists of one mitochondrial-encoded and 10 nuclear-encoded subunits. The protein encoded by this gene binds ubiquinone and participates in the transfer of electrons when ubiquinone is bound. This protein plays an important role in hypoxia-induced angiogenesis through mitochondrial reactive oxygen species-mediated signaling. Mutations in this gene are associated with mitochondrial complex III deficiency. Alternatively spliced transcript variants have been found for this gene. Related pseudogenes have been identified on chromosomes 1, 5 and X.
Form	25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol
