

Recombinant Full Length Human RPL11 Protein, Flag tagged

Cat. No. RPL11-01HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant protein of human ribosomal protein L11 (RPL11) with Flag tag was expressed in HEK293.
Species	Human
Source	HEK293T
ProteinLength	1-178 aa
Description	Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene encodes a ribosomal protein that is a component of the 60S subunit. The protein belongs to the L5P family of ribosomal proteins. It is located in the cytoplasm. The protein probably associates with the 5S rRNA. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome.
