

Recombinant Human KMT2B Protein, GST tagged

Cat. No. KMT2B-12H Lot. No. (See product label)

SPECIFICATION

Product Overview	The peptide corresponding to amino acids 2551 - 2715 of the KMT2B (MLL4)-SET protein (accession number NP_055542.1) was expressed in E. coli. The peptide contains the SET domain of MLL4 that is responsible for methyltransferase activity. Recombinant KMT2B (MLL4)-SET contains an N-terminal GST-Tag with a molecular weight of 45.2 kDa.
Species	Human
Source	E.coli
ProteinLength	2551-2715 aa
Description	This gene encodes a protein which contains multiple domains including a CXXC zinc finger, three PHD zinc fingers, two FY-rich domains, and a SET (suppressor of variegation, enhancer of zeste, and trithorax) domain. The SET domain is a conserved C-terminal domain that characterizes proteins of the MLL (mixed-lineage leukemia) family. This gene is ubiquitously expressed in adult tissues. It is also amplified in solid tumor cell lines, and may be involved in human cancer. Two alternatively spliced transcript variants encoding distinct isoforms have been reported for this gene, however, the full length nature of the shorter transcript is not known.
Form	Supplied in 25 mM Tris pH 8.0, 300 mM NaCl, 5% glycerol, 0.04% Triton X-100.
Molecular Mass	45.2 kDa

Applications	Recombinant KMT2B (MLL4)-SET is suitable for use in the study of enzyme kinetics, inhibitor screening, and selectivity profiling.
Storage	Recombinant proteins in solution are temperature sensitive and must be stored at -80 centigrade to prevent degradation. Avoid repeated freeze/thaw cycles and keep on ice when not in storage.
