SPECIFICATION

Product Overview	Human Alpha-Synuclein (A53T) Pre-formed Fibrils Protein, Tag Free is expressed from E.coli cells. It contains AA Met 1-Ala 140 (Accession # P37840-1 (A53T)). This protein carries no "tag". Predicted N-terminus: Met 1
Species	Human
Source	E.coli
ProteinLength	1-140 aa
Description	Alpha-synuclein is a neuronal protein that plays several roles in synaptic activity such as regulation of synaptic vesicle trafficking and subsequent neurotransmitter release. It acts also as a molecular chaperone in its multimeric membrane-bound state, assisting in the folding of synaptic fusion components called SNAREs (Soluble NSF Attachment Protein REceptors) at presynaptic plasma membrane in conjunction with cysteine string protein-alpha/DNAJC5. Abnormalities in alpha-synuclein are implicated in the pathogenesis of Parkinson's disease (PD). Alpha-synuclein is present in Lewy-bodies, the neuropathological hallmark of PD, and the protein and its aggregation have been widely linked to neurotoxic pathways that ultimately lead to neurodegeneration.
Form	Supplied as 0.2 µm filtered solution in PBS, pH7.4 with trehalose as protectant.
Molecular Mass	The protein has a calculated MW of 14.5 kDa.
