

Recombinant Monkeypox virus (strain Zaire-96-I-16) A17L Protein, His-tagged

Cat. No. A17L-10983H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Monkeypox virus (strain Zaire-96-I-16) A17L Protein, His Tag is expressed from human 293 cells (HEK293). It contains AA Met 1 - Pro 340 (Accession # Q8V4W1). This protein carries a polyhistidine tag at the C-terminus. Predicted N-terminus: Gly
Species	MPXV
Source	HEK293
ProteinLength	1-340 aa
Description	Monkeypox is a rare zoonosis caused by monkeypox virus, which has become the most serious orthopoxvirus and consists of complex double stranded DNA. The pathogenesis of monkeypox is that the virus invades the body from respiratory mucosa, multiplies in lymphocytes, and incurs into blood producing transient venereal toxemia. after the virus multiplies in cells, the cells can invade the blood and propagate to the skin of the whole body, causing lesions. A17L is essential for an early step in virion morphogenesis.
Form	Lyophilized from 0.22 µm filtered solution in PBS, pH7.4 with trehalose as protectant.
Molecular Mass	The protein has a calculated MW of 41.4 kDa. The protein migrates as 42-45 kDa under reducing (R) condition (SDS-PAGE) due to glycosylation.
Endotoxin	Less than 1.0 EU/µg by the LAL method/rFC method.

 45-1 Ramsey Road, Shirley, NY 11967, USA

Purity	>90% as determined by SDS-PAGE. >90% as determined by SEC-HPLC.
Storage	This product is stable after storage at: -20 to -70 centigrade for 12 months in lyophilized state; -70 centigrade for 3 months under sterile conditions after reconstitution. For long term storage, the product should be stored at lyophilized state at -20 centigrade or lower. Please avoid repeated freeze-thaw cycles.
Reconstitution	It is recommended that sterile water be added to the vial to prepare a stock solution of 0.2 µg/µL. Centrifuge the vial at 4 centigrade before opening to recover the entire contents.

GENE INFORMATION

Official Symbol	A17L
Synonyms	A17L
UniProt ID	Q8V4W1
