

Active Recombinant Mouse Alpl Protein, His-tagged

Cat. No. Alpl-11001M Lot. No. (See product label)

SPECIFICATION

Product Overview	Mouse ALPL Protein, His Tag is expressed from human 293 cells (HEK293). It contains AA Phe 18 - Ser 502 (Accession # P09242). This protein carries a polyhistidine tag at the C-terminus. Predicted N-terminus: Phe 18. The protein is designed as a dimer.
Species	Mouse
Source	HEK293
ProteinLength	18-502 aa
Description	This gene encodes a member of the alkaline phosphatase family of proteins. There are at least four distinct but related alkaline phosphatases: intestinal, placental, placental-like, and liver/bone/kidney (tissue non-specific). The first three are located together on chromosome 2, while the tissue non-specific form is located on chromosome 1. The product of this gene is a membrane bound glycosylated enzyme that is not expressed in any particular tissue and is, therefore, referred to as the tissue-nonspecific form of the enzyme. Alternative splicing results in multiple transcript variants, at least one of which encodes a preproprotein that is proteolytically processed to generate the mature enzyme. This enzyme may play a role in bone mineralization. Mutations in this gene have been linked to hypophosphatasia, a disorder that is characterized by hypercalcemia and skeletal defects.
Form	Supplied as 0.2 µm filtered solution in 20 mM Tris, 150 mM NaCl, pH7.5 with glycerol
