

Recombinant Human CTLA4, Fc Chimera

Cat. No. CTLA4-1913H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CTLA-4 produced in <i>E. Coli</i> is a homodimeric, non-glycosylated polypeptide chain containing a total molecular mass of 80 kDa. Each subunit (40kDa) is fused to a polypeptide linker to the Fc portion of Human IgG1. rHuCTLA-4 is purified by proprietary chromatographic techniques.
Species	Human
Source	E.coli
Description	CTLA-4 is expressed in low copy number by T-cells only after activation, but it binds CD28-ligand with approximately 20-fold higher affinity than CD28. A soluble form of the extracellular domain of CTLA-4 has been shown to bind CD28-ligand with high avidity and to suppress T-cell-dependent antibody responses in vivo. Large doses of this soluble protein also suppress responses to a second immunization.
Amino Acid Sequence	The sequence of the first five N-terminal amino acids was determined and was found to be Lys-Ala-Met-His-Val.
Form	Purified.
Purity	Greater than 95.0% as determined by: (a) Analysis by RP-HPLC. (b) Anion-exchange FPLC.
Dimers & Aggregates	<1% as determined by silver stained SDS-PAGE gel analysis.

Endotoxin	< 0.1 ng/g (IEU/g) of rHuCTLA-4.
Protein Content	Protein quantitation was carried out by two independent methods: 1) UV spectroscopy at 280 nm. 2) Analysis by RP-HPLC, using a standard solution of CTLA-4 as a Reference Standard.
Application	1) Molecular standard (Western, ELISA) in studying secreted BMP-4. 2) Preparing antibodies for BMP-4 monomer. 3) Molecule standard in detecting secreted BMP-4 in reduced SDS-PAGE.
Biological Activity	rHuCTLA-4 is fully biologically active when compared to standards.
Storage	-20°C, avoid freezing and thawing cycles after reconstitution.
