SPECIFICATION

Product Overview	Recombinant Human HAT1 protein was expressed in <i>E.coli</i> with His tag and purified by conventional chromatography techniques. MW=40.1 kDa (343aa).
Species	Human
Source	E.coli
Protein Length	20-341 aa
Description	HAT1, also known as histone acetyltransferase 1, is a type B histone acetyltransferase (HAT) that is involved in the rapid acetylation of newly synthesized cytoplasmic histones, which are in turn imported into the nucleus for de novo deposition onto nascent DNA chains. Histone acetylation, particularly of histone H4, plays an important role in replication-dependent chromatin assembly. Specifically, this HAT can acetylate soluble but not nucleosomal histone H4 at lysines 5 and 12, and to a lesser degree, histone H2A at lysine 5.
