

Recombinant Human EGF Protein

Cat. No. EGF-04H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human EGF Protein was expressed in E. coli.
Species	Human
Source	E.coli
Description	This gene encodes a member of the epidermal growth factor superfamily. The encoded preproprotein is proteolytically processed to generate the 53-amino acid epidermal growth factor peptide. This protein acts a potent mitogenic factor that plays an important role in the growth, proliferation and differentiation of numerous cell types. This protein acts by binding with high affinity to the cell surface receptor, epidermal growth factor receptor. Defects in this gene are the cause of hypomagnesemia type 4. Dysregulation of this gene has been associated with the growth and progression of certain cancers. Alternative splicing results in multiple transcript variants, at least one of which encodes a preproprotein that is proteolytically processed.
Form	Lyophilized powder, with no additives.
Molecular Mass	6,200 Da
Endotoxin	< 0.3ng/g (0.3IEU/g) determined by LAL test.
Purity	>95% as determined by SDS-PAGE and SEC-HPLC.
