

Recombinant Human METAP2 protein, HA-tagged

Cat. No. METAP2-630H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human METAP2(aa 1-478) fused with hemagglutinin (HA) tag (YPYDVDPDYA) at N-terminal was expressed in Insect cells.
Species	Human
Source	Insect Cells
ProteinLength	1-478 a.a.
Description	MetAP2 is a metalloenzyme that catalyzes removal of the N-terminal methionine from proteins, with the physiologically relevant metal thought to be either cobalt or manganese. Since it was identified as the target of the anti-angiogenic natural product fumagilin (Prod. No. BML-CT100), it has been studied for its involvement in cancer, angiogenesis, inflammation, and rheumatoid arthritis. Because of differing substrate specificities and kinetics it is not desirable to substitute bacterial methionine aminopeptidase for mammalian MetAP2.
Form	Liquid. In 20mM HEPES, pH 7.3, containing 150mM sodium chloride, 10% glycerol, 0.02% sodium azide, and 0.1mM CoCl ₂ .
Molecular Mass	~70kDa
Purity	≥95% (SDS-PAGE)
Stability	Stable for at least 6 months after receipt when stored at -80 centigrade.
