

Recombinant Human MRPS30 cell lysate

Cat. No. MRPS30-1135HCL Lot. No. (See product label)

SPECIFICATION

Product Overview

Species	Human
Description	Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes) consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed. Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that the latter contain a 5S rRNA. Among different species, the proteins comprising the mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which prevents easy recognition by sequence homology. This gene encodes a 28S subunit protein that is similar to the chicken pro-apoptotic protein p52. Transcript variants using alternative promoters or polyA sites have been mentioned in the literature but the complete description of these sequences is not available.
Size	100 ul
Storage Buffer	1X Sample Buffer (50 mM Tris-HCl, 2% SDS, 10% glycerol, 300 mM 2-mercaptoethanol, 0.01% Bromophenol blue)
Applications	Western Blot;

GENE INFORMATION

Gene Name	MRPS30 mitochondrial ribosomal protein S30 [Homo sapiens]
Official Symbol	MRPS30
Synonyms	MRPS30; mitochondrial ribosomal protein S30; PDCD9; 28S ribosomal protein S30, mitochondrial; PAP; programmed cell death 9; S30mt; MRP-S30; DKFZp566B2024;
Gene ID	10884
mRNA Refseq	NM_016640
Protein Refseq	NP_057724
MIM	611991
UniProt ID	Q9NP92
Chromosome Location	5q11
Function	structural constituent of ribosome;
