

Recombinant Human PCDHGA10 cell lysate

Cat. No. PCDHGA10-1301HCL **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Species

Human

Description

This gene is a member of the protocadherin gamma gene cluster, one of three related clusters tandemly linked on chromosome five. These gene clusters have an immunoglobulin-like organization, suggesting that a novel mechanism may be involved in their regulation and expression. The gamma gene cluster includes 22 genes divided into 3 subfamilies. Subfamily A contains 12 genes, subfamily B contains 7 genes and 2 pseudogenes, and the more distantly related subfamily C contains 3 genes. The tandem array of 22 large, variable region exons are followed by a constant region, containing 3 exons shared by all genes in the cluster. Each variable region exon encodes the extracellular region, which includes 6 cadherin ectodomains and a transmembrane region. The constant region exons encode the common cytoplasmic region. These neural cadherin-like cell adhesion proteins most likely play a critical role in the establishment and function of specific cell-cell connections in the brain. Alternative splicing has been described for the gamma cluster genes.

Size

100 ul

Storage Buffer

1X Sample Buffer (50 mM Tris-HCl, 2% SDS, 10% glycerol, 300 mM 2-mercaptoethanol, 0.01% Bromophenol blue)

Applications

Western Blot;

GENE INFORMATION

Gene Name	PCDHGA10 protocadherin gamma subfamily A, 10 [Homo sapiens]
Official Symbol	PCDHGA10
Synonyms	PCDHGA10; protocadherin gamma subfamily A, 10; protocadherin gamma-A10; PCDH GAMMA A10; PCDH-GAMMA-A10;
Gene ID	56106
mRNA Refseq	NM_018913
Protein Refseq	NP_061736
MIM	606297
UniProt ID	Q9Y5H3
Chromosome Location	5q31
Function	calcium ion binding;
