

Recombinant Human CYTH3 cell lysate

Cat. No. CYTH3-1425HCL **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Species	Human
Description	<p>This gene encodes a member of the PSCD (pleckstrin homology, Sec7 and coiled-coil domains) family. PSCD family members have identical structural organization that consists of an N-terminal coiled-coil motif, a central Sec7 domain, and a C-terminal pleckstrin homology (PH) domain. The coiled-coil motif is involved in homodimerization, the Sec7 domain contains guanine-nucleotide exchange protein (GEP) activity, and the PH domain interacts with phospholipids and is responsible for association of PSCDs with membranes. Members of this family appear to mediate the regulation of protein sorting and membrane trafficking. This encoded protein is involved in the control of Golgi structure and function, and it may have a physiological role in regulating ADP-ribosylation factor protein 6 (ARF) functions, in addition to acting on ARF1.</p>
Size	100 ul
Storage Buffer	1X Sample Buffer (50 mM Tris-HCl, 2% SDS, 10% glycerol, 300 mM 2-mercaptoethanol, 0.01% Bromophenol blue)
Applications	Western Blot;

GENE INFORMATION

Gene Name	CYTH3 cytohesin 3 [Homo sapiens]
Official Symbol	CYTH3
Synonyms	CYTH3; cytohesin 3; pleckstrin homology, Sec7 and coiled coil domains 3 , PSCD3; cytohesin-3; ARNO3; GRP1; ARF nucleotide-binding site opener 3; general receptor of phosphoinositides 1; pleckstrin homology, Sec7 and coiled-coil domains 3; PH, SEC7 and coiled-coil domain-containing protein 3; PSCD3;
Gene ID	9265
mRNA Refseq	NM_004227
Protein Refseq	NP_004218
MIM	605081
UniProt ID	O43739
Chromosome Location	7p22.1
Pathway	Arf6 signaling events, organism-specific biosystem; Class I PI3K signaling events, organism-specific biosystem; Insulin Signaling, organism-specific biosystem;
Function	1-phosphatidylinositol binding; ARF guanyl-nucleotide exchange factor activity; inositol 1,4,5-trisphosphate-sensitive calcium-release channel activity;
