

Recombinant Human INHBB

Cat. No. INHBB-62H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human Inhibin Beta B was expressed in Yeast.
Species	Human
Source	Yeast
Description	Inhibin, beta B is a protein which in humans is encoded by the INHBB gene. INHBB is a subunit of both activin and inhibin, two closely related glycoproteins with opposing biological effects. Inhibins are heterodimeric glycoproteins composed of an α subunit (INHA) and one of two homologous, but distinct, β subunits (βA or βB, this protein). mRNA for the two subunits has been demonstrated in the testes of adult rats. Inhibin can bind specifically to testicular interstitial cells throughout development and may be an important regulator of Leydig cell testosterone production or interstitial cell function. The inhibin beta B subunit joins the α subunit to form a pituitary FSH secretion inhibitor. Inhibin has been shown to regulate gonadal stromal cell proliferation negatively and to have tumour-suppressor activity.
Form	Lyophilized from sterile 20mM PB, 240mM NaCl, pH 6.0.
Molecular Mass	14.3kDa
Endotoxin	< 1.0 eu per μ g of the protein as determined by the LAL method.
Purity	>95 % as determined by SDS-PAGE

 45-1 Ramsey Road, Shirley, NY 11967, USA

Applications

Western blotting, ELISA

Storage

Store it under sterile conditions at -80°C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles. Samples are stable for up to twelve months from date of receipt at -80°C.
