Active Human Haptoglobin Reference Standard

Cat. No. HP-14H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	
Species	Human
Description	Haptoglobin is a positive acute phase protein that binds free hemoglobin and removes it from the circulation to prevent kidney injury, and iron lossfollowing hemolysis. Three major haptoglobinphenotypes are known to exist (Hp 1-1, Hp 2-1,and Hp 2-2). Hp 1-1 is biologically the most effective in binding free hemoglobin and suppressing inflammatory responses associated with free hemoglobin. Hp 2-2 is biologically the least active, and Hp 2-1 is moderately active.
Form	Liquid
Bio-activity	The level of Haptoglobin in the serum was quantified using ELISA.
Usage	For research use only, not for diagnostic or therapeutic use.
Quality Control Test	Generated from a human serum pool. This lot has been tested by standard laboratory procedures and found to be negative for HIV 1, HIV 2, Hepatitis B and Hepatitis C.
Storage	Stored at -20 °C, 4 °C for less than seven days, frozen for greater than seven days.
Concentration	1.31 mg/ml
Preservative	0.1% sodium azide
