

Native Dog Apotransferrin

Cat. No. ATF-177D **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Species	Dog
Source	Dog Plasma
Description	Transferrin is a monomeric glycoprotein found in plasma at an average concentration of 250 mg/100ml. The specific iron-binding protein in plasma, it has a role in the transportation and distribution of iron among the body organs, in iron metabolism and in prevention of iron loss via the kidney. Stored in bone marrow as TF-bound iron, it also possesses bacteriostatic and fungistatic activity. Clinically, decreases in transferrin are observed in congenital disorders, newborns, inflammatory diseases, hypo-proteinemias and nephritic syndrome; increases are found in pregnancy, iron-deficiency anemias and inoculation hepatitis. Transferrin is required by all types of cells in cultures for maximal growth. It is, therefore, an important factor used in defined culture media.
Form	Lyophilized
Molecular Mass	MW: 80,000
Purity	Greater than 98% by SDS-PAGE.
Usage	For research use or for use in further manufacturing.
