

Recombinant Human ZNRF2, GST-tagged

Cat. No. ZNRF2-135H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human ZNRF2 (amino acid residues 1-242), with N-terminal GST, was expressed in E.coli.
Species	Human
Source	E.coli
ProteinLength	1-242 a.a.
Description	The enzymes of the ubiquitylation pathway play a pivotal role in a number of cellular processes including the regulated and targeted proteasome-dependent degradation of substrate proteins. Three classes of enzymes are involved in the process of ubiquitylation; activating enzymes (E1s), conjugating enzymes (E2s) and protein ligases (E3s). Zinc and Ring Finger protein 2 (ZNRF2) is a member of the Really Interesting New Gene (RING) E3 protein ligase family and cloning of the human gene was first described by Araki et al. (2001).

Molecular Mass	~50kDa
Storage	12 months at -70°C. Avoid multiple freeze/thaw cycles.
Concentration	0.5mg/ml
