

Recombinant Human CDC34, His-tagged

Cat. No. CDC34-791H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human CDC34 protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques. MW =28.9kDa (256aa), confirmed by MALDI-TOF.
Species	Human
Source	E.coli
Description	CDC34 is a member of the ubiquitin-conjugating enzyme family. Ubiquitin-conjugating enzyme catalyzes the covalent attachment of ubiquitin to other proteins. This protein is a part of the large multiprotein complex, which is required for ubiquitin-mediated degradation of cell cycle G1 regulators, and for the initiation of DNA replication. CDC34 is thought to be the structural and functional homolog of <i>Saccharomyces cerevisiae</i> CDC34, which is essential for the G1 to S phase transition.
