

Recombinant Human PTP4A2, His-tagged

Cat. No. PTP4A2-2801H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human PTP4A2 protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques. MW =23.2 kDa (203aa), confirmed by MALDI-TOF.
Species	Human
Source	E.coli
Description	Protein tyrosine phosphatase type IVA 2 isoform 1, also known as PTP4A2, belongs to a small class of the protein tyrosine phosphatase (PTP) family. PTP4A2 is localized to the early endosome that play regulatory roles in a variety of cellular processes. This protein was found to interact with the beta-subunit of Rab geranylgeranyltransferase II (beta GGT II), and thus may function as a regulator of GGT II activity. Overexpression of this gene in mammalian cells conferred a transformed phenotype, which suggested its role in tumorigenesis.
