

Recombinant Human Pyruvate Kinase, Liver And RBC, His-tagged

Cat. No. PKLR-2804H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human PKLR protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques. MW = 59.2 kDa (549aa), confirmed by MALDI-TOF.
Species	Human
Source	E.coli
Description	PKLR is a pyruvate kinase that catalyzes the transphosphorylation of phosphoenolpyruvate into pyruvate and ATP, which is the rate-limiting step of glycolysis. The PKLR gene encodes the L- and R-type isoenzymes through alternative splicing events under the control of different promoters. The L-type isoform also exists as a tetramer and is upregulated by glucose with implications in maturity-onset diabetes of the young.

Purity > 90% by SDS – PAGE.

Form Liquid. In 20 mM Tris-HCl buffer (pH8.0) containing 0.2M NaCl, 1mM DTT, 10% glycerol.

Concentration 1 mg/ml (determined by Bradford assay).

Storage Can be stored at +4°C short term (1-2 weeks). For long term storage, aliquot and store at -20°C or -70°C. Avoid repeated freezing and thawing cycles.

GENE INFORMATION

Gene Name PKLR pyruvate kinase, liver and RBC [[Homo sapiens](#)]

Synonyms PKLR; pyruvate kinase, liver and RBC; PK1; PKL; PKR; RPK; PKRL; pyruvate kinase isozymes R/L; pyruvate kinase 1; OTTHUMP00000034069; pyruvate kinase type L; pyruvate kinase isozyme R/L; R-type/L-type pyruvate kinase; red cell/liver pyruvate kinase; pyruvate kinase, liver and blood cell; EC 2.7.1.40

UniProt ID	P30613
Chromosome Location	1q21
Pathway	Glycolysis / Gluconeogenesis; Insulin signaling pathway; Maturity onset diabetes of the young; Metabolic pathways; Purine metabolism; Pyruvate metabolism; Type II diabetes mellitus
Function	ATP binding; magnesium ion binding; nucleotide binding; potassium ion binding; pyruvate kinase activity; transferase activity
