

## Dengue Virus Type 3 NS1 Protein Reference Standard

Cat. No. pol-3D    Lot. No. (See product label)

### SPECIFICATION

|                         |                                                                                                          |
|-------------------------|----------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b> | Full length recombinant Dengue NS1 Type 3 protein with 6xHIS tag that was purified from 293 human cells. |
| <b>Species</b>          | DENV                                                                                                     |
| <b>Source</b>           | HEK293                                                                                                   |
| <b>Form</b>             | Liquid                                                                                                   |
| <b>Purity</b>           | >95% purity based on SDS page gel analysis.                                                              |
| <b>Full Length</b>      | Full L.                                                                                                  |

### GENE INFORMATION

|                        |                                                                                                                                                                                                                                                                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gene Name</b>       | pol polyprotein [ Dengue virus 3 ]                                                                                                                                                                                                                                                                                                                    |
| <b>Official Symbol</b> | pol                                                                                                                                                                                                                                                                                                                                                   |
| <b>Synonyms</b>        | polyprotein; membrane glycoprotein precursor M; membrane glycoprotein M; envelope protein E; anchored capsid protein C; nonstructural protein NS1; nonstructural protein NS2A; nonstructural protein NS2B; nonstructural protein NS3; nonstructural protein NS4A; nonstructural protein NS4B; nonstructural protein NS5; capsid protein C; 2K peptide |
