

Recombinant Human Klotho, Extracellular Domain, Fc Chimera

Cat. No. KL-2155H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant the signal peptide and the extracellular domain of human Klotho (aa 1-981) produced in HEK 293 cells are fused at the C-terminus to the Fc portion of human IgG.
Species	Human
Source	HEK293
Protein Length	1-981 a.a.
Description	Klotho is a glycosylated protein that plays an important role in the regulation of phosphate and calcium homeostasis. Human Klotho exists in both membrane bound and secreted forms, and is predominantly expressed in the kidney convoluted tubules, and to a lesser extent, in the brain, reproductive organs, endocrine glands, urinary bladder, skeletal muscle, placenta, and colon. The full length transmembrane form has a large extracellular domain composed of two homologous subunits termed KL1 and KL2, which contain 516 and 439 amino acid residues, respectively. The predominant circulating form, which is derived from alternative RNA splicing, contains the KL1 subunit and constitutes the N-terminal sequence of transmembrane Klotho. A third Klotho protein of about 128 kDa has been identified in the blood and cerebrospinal fluid.
Purity	≥90% (SDS-PAGE).
Formulation	Liquid.

 45-1 Ramsey Road, Shirley, NY 11967, USA

0.2µm-filtered solution in PBS.

Concentration ~0.15mg/ml.

Endotoxin Content <1EU/g protein (LAL-test).

Stability Working aliquots are stable for up to 3 months when stored at -20°C.

GENE INFORMATION

Gene Name [KL klotho \[Homo sapiens \]](#)

Synonyms KL; klotho; EC 3.2.1.31; Klotho peptide; OTTHUMP00000018796

Gene ID [9365](#)

mRNA Refseq [NM_004795](#)

Protein Refseq [NP_004786](#)

MIM [604824](#)

UniProt ID [Q9UEF7](#)

Chromosome Location 13q12

Pathway Signaling by FGFR

Function beta-glucosidase activity; beta-glucuronidase activity; cation binding; fibroblast growth factor binding; hormone activity; protein binding; signal transducer activity; vitamin D
