SPECIFICATION

Product Overview	Recombinant Human LSM4 protein was expressed in E.coli with T7-tag at the N-terminus. The molecular weight is 15350 Da(139 aa).
Species	Human
Source	E.coli
Description	U6 snRNA-associated Sm-like protein LSm4 is a protein that in humans is encoded by the LSM4 gene. Sm-like proteins were identified in a variety of organisms based on sequence homology with the Sm protein family (see SNRPD2; MIM 601061). Sm-like proteins contain the Sm sequence motif, which consists of 2 regions separated by a linker of variable length that folds as a loop. The Sm-like proteins are thought to form a stable heteromer present in tri-snRNP particles, which are important for pre-mRNA splicing.
