

Recombinant Human Carbonic Anhydrase III, Muscle Specific

Cat. No. CA3-1239H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	CA3 Human Recombinant produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 260 amino acids (1-260 a.a.) and having a molecular mass of 29.5 kDa. The CA3 is purified by proprietary chromatographic techniques.
Species	Human
Source	Human
ProteinLength	1-260 a.a.
Description	Carbonic anhydrase III is part of a multigene family that encodes carbonic anhydrase isozymes which are a class of metalloenzymes that catalyze the reversible hydration of carbon dioxide and are differentially expressed in various cell types. Carbonic anhydrase III expression is strictly tissue specific and present at high levels in skeletal muscle and much lower levels in cardiac and smooth muscle. CA3 catalyses swift conversion of carbon dioxide to bicarbonate and protons ($\text{CO}_2 + \text{H}_2\text{O} = \text{HCO}_3^- + \text{H}^+$). CA3 participates in a variety of biological processes, including respiration, calcification, acid-base balance, bone resorption and the formation of aqueous humor, cerebrospinal fluid, saliva and gastric juice. CA3 includes a zinc ion in its active site and maintains acid-base balance in blood and other tissues, and to help transport carbon dioxide of tissues.
Form	The CA3 solution contains 20mM Tris-HCl pH-8, 1mM DTT and 10% glycerol.
Purity	Greater than 90% as determined by SDS-PAGE.
