

Recombinant Human Soluble CD4 Molecule

Cat. No. CD4-99H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human sCD4 produced in <i>Baculovirus</i> is a single, glycosylated polypeptide chain containing 365 amino acids and having a non glycosylated molecular mass of 45 kDa. As a result of glycosylation the sCD4 migrates as a 46 kDa protein on standard SDS-PAGE. Detected By Western Immune Blots anti CD4 monoclonal antibody. The sCD4 is purified by proprietary chromatographic techniques.
Species	Human
Source	Insect Cells
Description	CD4 is a cell-surface glycoprotein found on the mature helper T cells and immature thymocytes, as well as on monocytes and macrophages. (Some cytotoxic T cells have CD4 protein as well.) Normally, about 65% of T cells in the blood are CD4+ (have CD4 protein protruding from their membrane). A mature T cells with either have CD4 or CD8, but not both. During one stage of development T cells develop CD4 and CD8 receptors, but they eventually are differentiated in the thymus and become more specialized.

Physical Appearance Sterile Filtered colorless solution (259µg/ml).

Purity Greater than 90.0% as determined by: (a) Analysis by RP-HPLC. (b) Analysis by SDS-PAGE.

Formulation The solution contains 10mM sodium phosphate buffer pH-7.0, 300 mM NaCl and 0.01% tween-80.

Biological Activity Immune reactive in ELISA using monoclonal anti CD4 in gpl2O capture ELISA assays.

Storage sCD4 Human Recombinant although stable at 14°C for 1 week, should be stored desiccated below -18°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Please prevent freeze-thaw cycles.
