

Active Recombinant Human CSF3 (27 - 200aa), Met tagged

Cat. No. CSF3-024E **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CSF3 (Thr27 Pro200, with an Nterminal Met) was expressed in E. coli and produced using nonanimal reagent in an animalfree laboratory.
Species	Human
Source	E.coli
Description	GCSF is a pleiotropic cytokine best known for its specific effects on the proliferation, differentiation, and activation of hematopoietic cells of the neutrophilic granulocyte lineage. It is produced mainly by monocytes and macrophages upon activation by endotoxin, TNF μ and IFN μ . In vitro, GCSF stimulates growth, differentiation and functions of cells from the neutrophil lineage. It also has blast cell growth factor activity and can synergize with IL3 to shorten the Go period of early hematopoietic progenitors. Consistent with its in vitro functions, GCSF has been found to play important roles in defense against infection, in inflammation and repair, and in the maintenance of steady state hematopoiesis.
Nterminal Sequence Analysis	Met
Molecular Mass	18.8 kDa
Activity	Measured in a cell proliferation assay using NFS60 mouse myeloid cells. The ED50 for this effect is typically 10 60 pg/mL.
