

Active Recombinant Human Neurotensin Receptor 3/Sortilin

Cat. No. SORT1-15H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human Neurotensin Receptor 3/Sortilin, expressed in Murine myeloma cell line.
Species	Human
Source	Mammalian Cells
Description	Sortilin (neurotensin receptor 3, glycoprotein 95) is a 95 kDa Type I transmembrane monomeric glycoprotein that is one of five known members of the mammalian vacuolar protein sorting 10p domain (Vps10pD) family of sorting receptors. Human preprosortilin is processed by signal sequence cleavage followed by propeptide cleavage at a furin recognition site. The cationic propeptide exhibits pH-dependent high affinity binding that blocks the Sortilin ligand binding site both pre and post cleavage. The extracellular/luminal sequence comprises the Vps10p domain, including 10 conserved cysteines (10 CC) essential for ligand binding. The cytoplasmic domain sorting motifs confer all trafficking during synthesis, targeting to lysosomes, endocytosis and Golgi-endosome transport? as little as 10% may be found on the cell surface.
Form	Lyophilized from a 0.2 µm filtered solution in PBS.
Bio-activity	Measured by its binding ability in a functional ELISA. Immobilized rhSortilin at 4 µg/mL (100 µL/well) can bind rhβNGF with a linear range of 3-200 ng/mL.
Molecular Mass	Predicted Molecular Mass: 99.7 kDa. SDS PAGE: 95-100 kDa, reducing conditions.
