

Recombinant Human MTL5, GST-tagged

Cat. No. MTL5-134H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human MTL5(399 a.a. - 508 a.a.), fused with GST-tag at N-terminal, was expressed in wheat germ.
Species	Human
Source	Wheat Germ
Description	Metallothionein proteins are highly conserved low-molecular-weight cysteine-rich proteins that are induced by and bind to heavy metal ions and have no enzymatic activity. They may play a central role in the regulation of cell growth and differentiation and are involved in spermatogenesis. This gene encodes a metallothionein-like protein which has been shown to be expressed differentially in mouse testis and ovary. Two transcript variants encoding different isoforms have been found for this gene.
Molecular Mass	37.84 kDa
