

Active Recombinant Human ACP1 Protein, His tagged

Cat. No. ACP1-1068H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant ACP1 (1-158 aa), fused to His-tag at N-terminus, was expressed in E. coli and purified by conventional chromatography techniques.
Species	Human
Source	E.coli
ProteinLength	1-158 aa
Description	The product of this gene belongs to the phosphotyrosine protein phosphatase family of proteins. It functions as an acid phosphatase and a protein tyrosine phosphatase by hydrolyzing protein tyrosine phosphate to protein tyrosine and orthophosphate. This enzyme also hydrolyzes orthophosphoric monoesters to alcohol and orthophosphate. This gene is genetically polymorphic, and three common alleles segregating at the corresponding locus give rise to six phenotypes. Each allele appears to encode at least two electrophoretically different isozymes, Bf and Bs, which are produced in allele-specific ratios. Multiple alternatively spliced transcript variants encoding distinct isoforms have been identified for this gene.
