

Recombinant Human DRD1

Cat. No. DRD1-10H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human DRD1, fused without tag, was expressed in wheat germ.
Species	Human
Source	Wheat Germ
Description	This gene encodes the D1 subtype of the dopamine receptor. The D1 subtype is the most abundant dopamine receptor in the central nervous system. This G-protein coupled receptor stimulates adenylyl cyclase and activates cyclic AMP-dependent protein kinases. D1 receptors regulate neuronal growth and development, mediate some behavioral responses, and modulate dopamine receptor D2-mediated events. Alternate transcription initiation sites result in two transcript variants of this gene.
