

Recombinant Human Pleiotrophin, His-tagged

Cat. No. PTN-131H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	<i>E. coli</i> , its molecular weight is 17.3 kDa protein containing 136 amino acid residues of the OSF-1 human and 16 additional amino acid residues-His-Tag, thrombin cleavage site (<u>underlined</u>).
Species	Human
Source	E.coli
Description	Pleiotrophin (Osteoblast-Specific Factor-1, OSF-1) contains 136 amino acid residues. The sequence is very rich in cationic amino acids (24% of the residues); lysine cluster sequences are found in the N-terminal and C-terminal ends of the structure. The OSF-1 gene was shown by Northern blotting analysis to be expressed in mouse calvarial osteoblast-enriched cells and in mouse brain tissues, but not in thymus, spleen, kidney, liver, lung, testis or heart. Pleiotrophin has the ability to promote adhesion, migration, expansion, and differentiation of human osteoprogenitor cells. In addition to certain types of cancer, the embryonic growth and differentiation factor pleiotrophin is found also in adults in inflammatory diseases. In osteoarthritis, pleiotrophin is especially expressed in early stages, and its concentrations in the synovial fluid could serve as a marker for the progress of the disease.

Purity	>95% (SDS-PAGE analyzed).
Purification method	Three-step procedure using affinity Ni-NTA chromatography and size exclusion chromatography before and after refolding.
Formulation	Sterile filtered and lyophilized from 0.5 mg/ml in 0.1 M phosphate buffer and 0.1 M NaCl, pH 7.2.
Specificity	The amino acid sequence of the Pleiotrophin human recombinant is 100% homologous to the amino acid sequence of the OSF-1 human without signal sequence.
Reconstitution	Add 0.2 ml of PBS pH 7.2 and let the lyophilized pellet dissolve completely.
Stability/Shelf Life	The lyophilized protein remains stable until the expiry date when stored at -20°C.
Applications	Western blotting, ELISA.
Storage	Store lyophilized protein at -20°C. Aliquot the product after reconstitution to avoid repeated freezing/thawing cycles. Reconstituted protein can be stored at 4°C for a limited period of time; it does not show any change after two weeks at 4°C.

GENE INFORMATION

Gene Name	PTN pleiotrophin [Homo sapiens]
Synonyms	PTN; pleiotrophin; HARP; HBNF; HBGF8; NEGF1; PTN;Heparin-binding growth-associated molecule; HB-GAM; Heparin-binding growth factor 8;Osteoblast-specific factor 1;OSF-1; Heparin-binding neurite outgrowth-promoting factor 1; HBNF-1; Heparin-binding brain mitogen; HBBM; HBGF-8; HBNF1; heparin affin regulatory protein; heparin binding growth factor 8; neuritegrowth-promoting factor 1

Gene ID	5764
mRNA Refseq	NM_002825
Protein Refseq	NP_002816
UniProt ID	P21246
Chromosome Location	7q33-q34
MIM	162095
Function	growth factor activity; heparin binding; phosphoprotein phosphatase inhibitor activity
