

Active Native Human Follicle Stimulating Hormone

Cat. No. FSH-1564H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	The product contains less than 2% lutenizing hormone and less than 1% each of thyroid stimulating hormone, growth hormone, prolactin, and ACTH. CAS number is 9002-68-0.
Species	Human
Source	Human Pituitary
Description	FSH is a heterodimeric glycoprotein hormone composed of α and β chains. The α chain has 89 amino acids and the β chain has 115 amino acids. The α chain is not active. The biological specificity is attributed to the β chain. FSH induces maturation of Graafian follicles of the ovary, promotes development of germinal cells in males, and activates cytosolic tyrosine kinase.
Bio-activity	~7,000 IU/mg
Molecular Mass	35 kDa
Characteristic	The α -chain is not active; biological specificity is attributed to the β -chain. Induces maturation of Graafian follicles of the ovary; promotes development of germinal cells in males; activates cytosolic tyrosine kinase.
Usage	For Laboratory Use Only. Not for drug, household or other uses.
Storage	The product can be reconstituted with 1 ml of water or phosphate buffer. The vial (dry
