

## Recombinant CPI<sub>m</sub> protein, His-tagged

Cat. No. CPI<sub>m</sub>-01L    Lot. No. (See product label)

### SPECIFICATION

|                  |                                                                                                                                      |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Product Overview | Recombinant CPI <sub>m</sub> was expressed in E. coli.                                                                               |
| Source           | E.coli                                                                                                                               |
| Description      | CPI <sub>m</sub> is a mutant by site-directed mutagenesis of optimized CPI gene (Asn66-Lsy66).                                       |
