

Recombinant Human Mitogen-Activated Protein Kinase Kinase 1, GST-tagged

Cat. No. MAP2K1-1033H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full-length human MAP2K1 was expressed by baculovirus in Sf9 insect cells using an N-terminal GST tag.
Species	Human
Source	Sf9 Cells
Description	MAP2K1 is a member of the dual specificity protein kinase family that acts as a mitogen-activated protein kinase (MAPK) kinase. MAP2K1 lies upstream of MAPK/ERK and stimulates the enzymatic activity of MAPK/ERK upon a wide variety of extra- and intracellular signals. As an essential component of MAPK/ERK signal transduction pathway, MAP2K1 is involved in many cellular processes such as proliferation, differentiation, transcription regulation and development. Constitutive activation of MAP2K1 results in cellular transformation. Thus, MAP2K1 represents a likely target for pharmacologic intervention in proliferative disease such as cancer.
Applications	Kinase Assay; Western Blot
Molecular Weight	72 kDa
Expression System	Sf9 insect cells using baculovirus
