Recombinant Human Polo-Like Kinase 1, His-tagged

Cat. No. PLK1-1085H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full-length human PLK1 was expressed by baculovirus in Sf9 insect cells using a N-terminal His tag.
Species	Human
Source	Sf9 Cells
Description	PLK1 is a member of the Polo-Like Kinase family that localize to centrosomes or spindle pole bodies and undergo dramatic subcellular relocation during the cell cycle. Deregulated activities of PLK1 often result in abnormalities in centrosome duplication, maturation, and/or microtubule dynamics. PLK1 also regulate the function of the Golgi complex. Deregulated expression of human PLK1 is strongly correlated with the development of many types of malignancies, and ectopic expression of PLK1 dominant negative protein leads to rapid cell death.
Applications	Kinase Assay; Western Blot
Molecular Weight	70 kDa
Expression System	Sf9 insect cells using baculovirus
Form	Recombinant protein stored in 50mM sodium phosphate, pH 7.0, 300mM NaCl, 150 mM imidazole, 0.1 mM PMSF, 0.25 mM DTT, 25% glycerol.
