

Recombinant Human Proteasome (prosome, macropain) Subunit, Beta Type, 2, His-tagged

Cat. No. PSMB2-1321H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human PSMB2 protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques.
Species	Human
Source	E.coli
Description	PSMB2 is a member of the proteasome T1B family, which is a 20S core beta subunit. The proteasome is a multicatalytic proteinase complex with a highly ordered ring-shaped 20S core structure. Proteasomes are distributed throughout eukaryotic cells at a high concentration and cleave peptides in an ATP/ubiquitin-dependent process in a non-lysosomal pathway. An essential function of a modified proteasome, the immunoproteasome, is the processing of class I MHC peptides.
