

Recombinant Full Length Mouse GLI1 Protein, His tagged

Cat. No. GLI1-6401M **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Full Length Mouse GLI1 Protein with His tag was expressed in Insect Cells.
Species	Mouse
Source	Insect Cells
ProteinLength	1-1111 aa
Description	Enables several functions, including DNA-binding transcription factor activity, RNA polymerase II-specific; RNA polymerase II cis-regulatory region sequence-specific DNA binding activity; and microtubule binding activity. Involved in positive regulation of DNA-templated transcription and regulation of osteoblast differentiation. Acts upstream of or within several processes, including central nervous system development; liver regeneration; and regionalization. Located in axoneme and nucleus. Is expressed in several structures, including alimentary system; central nervous system; embryo mesenchyme; long bone; and sensory organ. Human ortholog(s) of this gene implicated in gallbladder cancer and preaxial polydactyly I. Orthologous to human GLI1 (GLI family zinc finger 1).
