

Active Recombinant Human Interleukin 16

Cat. No. IL16-534H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human IL16 was expressed in E. coli and purified by using conventional chromatography techniques.
Species	Human
Source	Human
Description	IL16 is a CD8+ T cell-derived cytokine that induces chemotaxis of CD4+ T cells and CD4+ monocytes and eosinophils. Analysis by gel filtration suggests that, under physiological conditions, hIL16 exists predominantly as a noncovalently linked multimer, but that some IL16 may exist as a monomer. However, only the multimeric form appears to possess chemotactic activity, suggesting that receptor cross-linking may be required for activity. IL16 also induces expression of IL2 receptor (IL2R) and MHC class II molecules on CD4 + T cells. Human and Mouse IL16 show significant cross-species reactivity.
