

Recombinant Human Myosin Light Chain, Phosphorylatable, Fast Skeletal Muscle, His-tagged

Cat. No. MYLPF-5081H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human MYLPF protein, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography techniques.
Species	Human
Source	Human
Description	Myosin regulatory light chains, including MRCL3, MYLPF and MYL9, regulate contraction in smooth muscle and non-muscle cells via phosphorylation by myosin light chain kinase (MLCK). Phosphorylation of myosin regulatory light chains, catalyzed by MLCK in the presence of calcium and calmodulin, increases the actin-activated myosin ATPase activity, thereby regulating the contractile activity. MYLPF is critically important for fast and slow skeletal muscle development.
Concentration	0.25 mg/ml
Form	Supplied as a liquid in 20mM Tris-HCl buffer, pH 8.0, containing 1mM DTT, 10% glycerol and 100mM NaCl.
Purity	> 85% by SDS - PAGE
