

Recombinant Human ACVRL1, His-tagged

Cat. No. ACVRL1-26214TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment, corresponding to amino acids 144-503 of Human ACVRL1, expressed by baculovirus in Sf9 insect cells using an N terminal proprietary tag.
Species	Human
Protein Length	144-503 a.a.
Description	This gene encodes a type I cell-surface receptor for the TGF-beta superfamily of ligands. It shares with other type I receptors a high degree of similarity in serine-threonine kinase subdomains, a glycine- and serine-rich region (called the GS domain) preceding the kinase domain, and a short C-terminal tail. The encoded protein, sometimes termed ALK1, shares similar domain structures with other closely related ALK or activin receptor-like kinase proteins that form a subfamily of receptor serine/threonine kinases. Mutations in this gene are associated with hemorrhagic telangiectasia type 2, also known as Rendu-Osler-Weber syndrome 2.
Conjugation	HIS
Biological activity	The specific activity of ACVRL1-26214TH was determined to be 22 nmol/min/mg by activity assay.
