

Recombinant Human ACY1, His-tagged

Cat. No. ACY1-26570TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human Aminoacylase 1 with an N terminal His tag; 428 amino acids including tag, predicted MWt 48kDa.
Species	Human
Source	E.coli
ProteinLength	408 amino acids
Description	This gene encodes a cytosolic, homodimeric, zinc-binding enzyme that catalyzes the hydrolysis of acylated L-amino acids to L-amino acids and an acyl group, and has been postulated to function in the catabolism and salvage of acylated amino acids. This gene is located on chromosome 3p21.1, a region reduced to homozygosity in small-cell lung cancer (SCLC), and its expression has been reported to be reduced or undetectable in SCLC cell lines and tumors. The amino acid sequence of human aminoacylase-1 is highly homologous to the porcine counterpart, and this enzyme is the first member of a new family of zinc-binding enzymes. Mutations in this gene cause aminoacylase-1 deficiency, a metabolic disorder characterized by central nervous system defects and increased urinary excretion of N-acetylated amino acids. Alternative splicing of this gene results in multiple transcript variants. Read-through transcription also exists between this gene and the upstream ABHD14A (abhydrolase domain containing 14A) gene, as represented in GeneID:100526760. A related pseudogene has been identified on chromosome 18.

Conjugation	HIS
Molecular Weight	48.000kDa inclusive of tags
Tissue specificity	Expression is highest in kidney, strong in brain and weaker in placenta and spleen.
Form	Liquid
Purity	>90% by SDS-PAGE
Storage buffer	Preservative: None Constituents: 10% Glycerol, 20mM Tris HCl, 1mM DTT, pH 8.0
Storage	Shipped at 4°C. Upon delivery aliquot and store at -20°C or -80°C. Avoid repeated freeze / thaw cycles.

Sequence Similarities	Belongs to the peptidase M20A family.
GENE INFORMATION	
Gene ID	ACY1 aminoacylase 1 [Homo sapiens]
