

Recombinant Human AK4, His-tagged

Cat. No. AK4-27152TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human AK3L1 (amino acids 1-223) with N terminal His tag; 259 aa, 29.3 kDa.
Species	Human
Source	E.coli
ProteinLength	223 amino acids
Description	This gene encodes a member of the adenylate kinase family of enzymes. The encoded protein is localized to the mitochondrial matrix. Adenylate kinases regulate the adenine and guanine nucleotide compositions within a cell by catalyzing the reversible transfer of phosphate group among these nucleotides. Five isozymes of adenylate kinase have been identified in vertebrates. Expression of these isozymes is tissue-specific and developmentally regulated. A pseudogene for this gene has been located on chromosome 17. Three transcript variants encoding the same protein have been identified for this gene. Sequence alignment suggests that the gene defined by NM_013410, NM_203464, and NM_001005353 is located on chromosome 1.
