

Recombinant Human AKT3, His-tagged

Cat. No. AKT3-26391TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length human AKT3 with N-terminal His tag expressed in a baculovirus expression system, 60 kDa.
Species	Human
Description	The protein encoded by this gene is a member of the AKT, also called PKB, serine/threonine protein kinase family. AKT kinases are known to be regulators of cell signaling in response to insulin and growth factors. They are involved in a wide variety of biological processes including cell proliferation, differentiation, apoptosis, tumorigenesis, as well as glycogen synthesis and glucose uptake. This kinase has been shown to be stimulated by platelet-derived growth factor (PDGF), insulin, and insulin-like growth factor 1 (IGF1). Alternatively splice transcript variants encoding distinct isoforms have been described.
Conjugation	HIS
Tissue specificity	In adult tissues, it is highly expressed in brain, lung and kidney, but weakly in heart, testis and liver. In fetal tissues, it is highly expressed in heart, liver and brain and not at all in kidney.
Biological activity	Specific Activity: 10 pmol/min/μg.
Form	Liquid
Purity	>95% by SDS-PAGE
