

Recombinant Human ANG

Cat. No. ANG-27314TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human Angiogenin with an N terminal proprietary tag; predicted mwt: 39.64 kDa inclusive of tag.
Species	Human
Source	Wheat Germ
ProteinLength	123 amino acids
Description	The protein encoded by this gene is an exceedingly potent mediator of new blood vessel formation. It hydrolyzes cellular tRNAs resulting in decreased protein synthesis and is similar to pancreatic ribonuclease. Alternative splicing results in two transcript variants encoding the same protein. This gene and the gene that encodes ribonuclease, RNase A family, 4 share promoters and 5 exons. Each gene splices to a unique downstream exon that contains its complete coding region.
Molecular Weight	39.640kDa inclusive of tags
Tissue specificity	Expressed predominantly in the liver. Also detected in endothelial cells and spinal cord neurons.
Form	Liquid
Purity	Proprietary Purification
