

Recombinant Human APOA5, Protein A-tagged

Cat. No. APOA5-26876TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full-length Human Apolipoprotein A V with C-Terminal DDDDK tag.
Species	Human
Source	HEK293
ProteinLength	343 amino acids
Description	The protein encoded by this gene is an apolipoprotein that plays an important role in regulating the plasma triglyceride levels, a major risk factor for coronary artery disease. It is a component of high density lipoprotein and is highly similar to a rat protein that is upregulated in response to liver injury. Mutations in this gene have been associated with hypertriglyceridemia and hyperlipoproteinemia type 5. This gene is located proximal to the apolipoprotein gene cluster on chromosome 11q23. Alternatively spliced transcript variants encoding the same protein have been identified.
Conjugation	FLAG
Molecular Weight	40.100kDa inclusive of tags
Tissue specificity	Liver and plasma.
Form	Lyophilised: Add deionized water (200 µl) to prepare a working stock solution of 0.5 mg/mL
