

Recombinant Human BAALC, His-tagged

Cat. No. BAALC-27424TH Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant full length protein, corresponding to amino acids 1-145 of Human BAALC with N terminal His tag; 165 amino acids, 17.7kDa.
Species	Human
Source	E.coli
ProteinLength	1-145 a.a.
Description	This gene was identified by gene expression studies in patients with acute myeloid leukemia (AML). The gene is conserved among mammals and is not found in lower organisms. Tissues that express this gene develop from the neuroectoderm. Multiple alternatively spliced transcript variants that encode different proteins have been described for this gene; however, some of the transcript variants are found only in AML cell lines.
Conjugation	HIS
Tissue specificity	Expressed by neural and hematopoietic cells. Expression is found both in normal early progenitor cells and in the most immature type of blasts in acute leukemia but not in mature hematopoietic cells. Isoform 2 and isoform 6 are expressed in the brain. Iso
Form	Liquid
