

Recombinant Human BAK1

Cat. No. BAK1-26168TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment corresponding to amino acids 100-211 of Human Bak with an N terminal proprietary tag; Predicted MWt 37.95 kDa.
Species	Human
Source	Wheat Germ
ProteinLength	112 amino acids
Description	The protein encoded by this gene belongs to the BCL2 protein family. BCL2 family members form oligomers or heterodimers and act as anti- or pro-apoptotic regulators that are involved in a wide variety of cellular activities. This protein localizes to mitochondria, and functions to induce apoptosis. It interacts with and accelerates the opening of the mitochondrial voltage-dependent anion channel, which leads to a loss in membrane potential and the release of cytochrome c. This protein also interacts with the tumor suppressor P53 after exposure to cell stress.
Molecular Weight	37.950kDa inclusive of tags
Tissue specificity	Expressed in a wide variety of tissues, with highest levels in the heart and skeletal muscle.
Form	Liquid
Purity	Proprietary Purification
